

AC Presents 2 New Pieces

Technical rider · CultureHub LA · September 16 to 25, 2026

SEPT 24 CONFIRMED · SEPT 19 PENDING

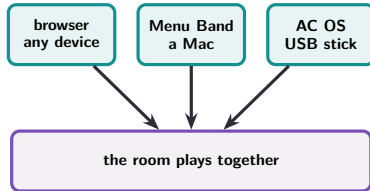

Jeffrey Alan Scudder · Aesthetic.Computer & Pals
technical rider revised 18 August 2026 ·
aesthetic.computer

Sat Sep 19, 2:00–3:30 p.m. Grokaesthetic Workshop, free and public. **Thu Sep 24, 7:00 p.m.** Piece 1, swap, Piece 2, conversation, free play. Thursday is confirmed; if Saturday folds into it, the workshop's requirements move to Thursday afternoon and nothing else changes.

Event one · Saturday

grokaesthetic

Bring a computer, leave playing one.

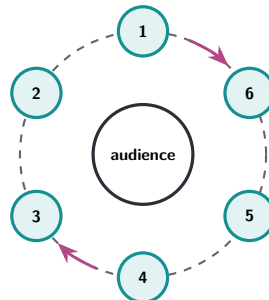

SYSTEM REQUIREMENTS

- **Network** — guest Wi-Fi, 25–35 devices, **app downloads permitted**. A captive portal kills route two at the door.
- **Permissions** — participant laptops may boot from USB.
- **Power** — strips at the seating for about 20 laptops.
- **Audio** — stereo minimum; surround preferred.
- **Room** — face-to-face seating, a microphone, loaner positions.
- **Catering** — snack table and a bin.

Piece 1 · Thursday

Note(s)pat(ial) Native

Six laptops carry sound around the room while it turns.

the field rotates

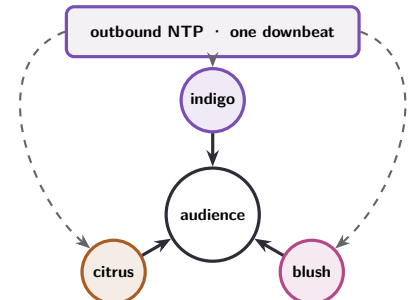

SYSTEM REQUIREMENTS

- **Machines** — six surplus laptops on AC OS drives, plus a control laptop. Artist-supplied.
- **Audio** — **six discrete inputs** to the Kalio 5.1; six line-level outs, DI and cabling.
- **Sixth channel** — bandwidth confirmed. If LFE-only, five full-range channels carry the field.
- **Network** — dedicated switch, off public traffic.
- **Power, space, video** — seven positions; six plinths around the audience; projector, screen, and HDMI at the performance position.
- **Will not run with** — six stationary voices. The field rotates across the outputs.

Piece 2 · Thursday

The MacNeoPolitan Trio

Three laptops, one downbeat, held by the clock rather than a cable.

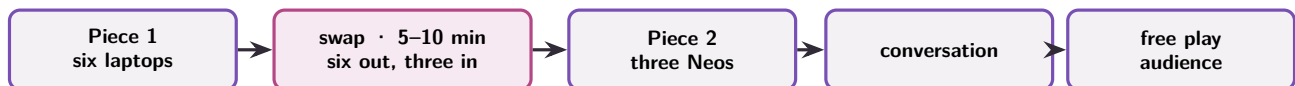

one voice each · inputs 1, 2, 3

SYSTEM REQUIREMENTS

- **Machines** — three MacBook Neos on macOS, score pre-loaded. Artist-supplied.
- **Audio** — **three full-range positions** in a triangle around the audience; indigo, citrus, blush to inputs 1, 2, 3.
- **Network** — **outbound NTP**. No cable and no timecode between the machines, so blocked NTP smears the downbeat.
- **Control** — client-to-client ssh, or each machine armed locally — decided before the rehearsal.
- **Power and space** — three positions; three stable surfaces.
- **Does not use** — USB boot. macOS on Apple silicon; AC OS is x86_64 UEFI.

The evening

The swap is hardware, not a patch, and it happens in front of the audience: it needs budgeted minutes and a decision about what the room does meanwhile — lights and talking, a held drone, or the score on the projector. Six line-level outs cover both pieces if the patch can change during it; nine if not. The instruments stay on afterward, so nothing is struck until the room clears.

Also from the house — one technical rehearsal long enough to change the patch and run both; seating for 20–40 with an accessible route; a stereo documentation feed separate from the spatial mix.

CONFIRM WITH CULTUREHUB

- Kalio layout and sixth-channel bandwidth. Six discrete inputs, or a house spatializer?
- Interface channels, connectors, sample rate — and **can the patch change during the swap?**
- Network: **outbound NTP**, client-to-client ssh, **guest Wi-Fi with app downloads** and its device ceiling.
- **May participant laptops boot from USB in the space?**
- Projector and screen; room dimensions, capacity, accessible route; livestream platform and archive ownership.
- Load-in, soundcheck, strike hours, changeover time — and **does September 19 stay separate or fold into the 24th?**

Jeffrey brings nine machines and spares, AC OS drives, loaner laptops, power supplies, adapters, and recovery media. **Carried risks:** citrus is the 8 GB development Mac and performs from a clean boot; there is no third Neo yet; clock drift is silent, and is verified at the rehearsal.
