

2FA Brush

Aesthetic.Computer Hardware

Model: AC-2FB-01

Class: Personal hygiene / hardware security token

Ships: Spring 2031 (projected, unprojected)

Status: Concept — does not exist yet

The short version

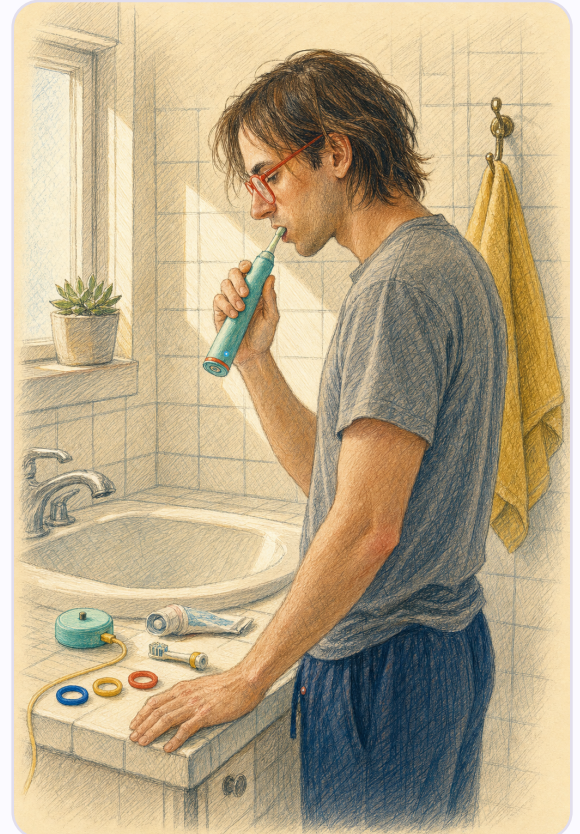

A security brush. An electric toothbrush that is also a hardware security key — a YubiKey you brush your teeth with. It charges over USB-C on the bottom, and that same port plugs into your laptop to authenticate and hold your credentials.

The security key problem is a habit problem: keys get lost, left in drawers, forgotten on other keychains. A toothbrush has the strongest habit loop of any object you own — twice a day, every day, one fixed location. The 2FA Brush piggybacks identity on hygiene: the one device you never forget to touch.

And nobody borrows your toothbrush.

Brushing is the passphrase

The 6-axis motion sensor learns your **brushprint** — the personal signature of how you brush. Two minutes in the morning unlocks the day's credentials. A stolen 2FA Brush is just a brush.

Pictured: a user, mid- passphrase. The product drawn does not exist.

Key features

✓	Secure element in the handle — FIDO2 / WebAuthn, TOTP, SSH & PGP keys. Same class as a dedicated security key.
✓	One port, two jobs — flush USB-C on the bottom face: drops into the dock at night, plugs into the laptop to auth.
✓	Brushprint liveness — brushing unlocks; possession alone doesn't.
✓	NFC tap-to-auth — phone 2FA without leaving the bathroom.
✓	Heads are replaceable, identity is not — credentials live in the handle; swap bristles, keep keys.
✓	Session LED — one soft light near the base, breathing while a session is live. The only tell.

2FA Brush

Specifications & Pricing

Technical specifications

Spec	Value
Secure element	Tamper-resistant, CC EAL6+ class; keys never leave the handle
Protocols	FIDO2 / WebAuthn, U2F, TOTP, SSH, PGP; NFC Type 4 tap-to-auth
Liveness	6-axis IMU brushprint — 2:00 of your brushing unlocks a 24h session
Motor	Sonic, 31,000 strokes/min; quad-pacer marks the four mouth zones
Battery	30 days per charge; USB-C 5V on the bottom face, steel-ringed, flush
Water	IPX7 — port sealed for brushing; data only when dry (the dock knows)
Heads	Replaceable, standard mount, 3-month service life; identity stays in handle
Finishes	Matte chalk, graphite, mint; four snap-on color rings in every box

Pricing

Item	Price
2FA Brush — handle, dock, two heads, four color rings	\$129.00
Family 4-pack — four handles, four identities, one dock with four bays	\$399.00
Replacement heads, 3-pack (bristles only — your keys aren't in there)	\$24.00
Travel dock — charges and locks the port shut in one gesture	\$39.00
BrushCare+ — encrypted credential backup & recovery, per month	\$4.00

Starting at \$129.00

The family bathroom problem

Four identical brushes are four identical attack surfaces, so the 2FA Brush refuses to be identical: snap-on color rings disambiguate at arm's length, and the brushprint disambiguates when the rings get swapped by a six-year-old. Picking up the wrong brush fails *both* factors — which is, for once, the hygienic outcome too.

Recovery story

Credentials pair to the handle and back up (encrypted, opt-in) under BrushCare+. Lose the brush, buy a new one, brush for two minutes to re-attest, restore. The bristles were due for replacement anyway.

The 2FA Brush is a speculative product from the Aesthetic.Computer futures shelf (marketing/products). It is not for sale, not FCC certified, and not endorsed by any dental association. Brushing twice daily is real advice; the rest of this document is not.
