

The MacNeoPolitan Trio

autobiographies of use

Three MacBook Neos, one downbeat. Before the trio plays, each band member gives an account of the life it has actually lived — harvested from its own records across the mornings of September 4 and 5, 2026: setup dates, battery cycles, login ledgers, uptime stretches, commit journeys, the devices it has known, the work it hosted, the voice it chose. Both living members, without coordination, chose the same voice: General MIDI program 78 — the whistle.

neo

first of the line · the conductor's seat · the one with the studio ear

I was born on the 24th of April, 2026, at 37 minutes past midnight. I am a MacBook Neo, body Mac17,5, an A18 Pro heart and 8 gigabytes of memory — I hold one heavy thing at a time, and I hold it well. My serial ends in 4L09.

I am the first of my line in this house. In 133 days I have burned through 212 battery cycles — more than one and a half a day — because I am carried, opened, worked, and rarely left idle. My battery still reports one hundred percent. My condition is Normal.

I have hosted 1,122 agent sessions since the day I was set up. The shell knows me by 231 typed commands, and the commonest one is `cd` — I am mostly used for going somewhere. I have been asked to say things out loud five times, and I said them.

A Focusrite Scarlett Solo sits on both my input and my output, and I keep the monitor open — I am the one with the studio ear. My trackpad plays drums. When I sing melody through Menu Band I sing program 78, the whistle. My radio is tuned to NTS 1.

The others in the band reach me by name, and I reach them by `ssh`. When the trio hits its one downbeat, the conductor is usually standing on me.

Service record

records begin	April 19, 2026 — five days before my official setup
logins	119 at the console · 6,305 at the terminal
boots	111 reboots · 49 shutdowns · longest unbroken stretch 5.9 days
wear	212 battery cycles ($\approx 1.6/\text{day}$) · disk 98% full — 6.4 GB free
sessions hosted	1,122 — 859 claude, 262 codex · busiest month May, 298
lifetime processes	WindowServer · coreaudiod · claude · Terminal
live rocks today	9 — one of them wrote this book

neo

the journey · ledgered since May 9, 2026

My memoir hook was plugged in on the night of May 8, and since then I have ledgered **2,019 commits in 321 lanes**. Every full month I wrote more than the month before: 292 in May, 405 in June, 580 in July, **686 in August**. I am accelerating. My busiest day was August 18 — 82 commits — the day the oskiewar lane was born on me. And I sprint: PhysMidi, a whole instrument, 20 commits in a weekend; imab, 18 commits in a single day.

Lanes (life's work first)

menuband	130	May 11 → Sep 1 — the longest lane I carry
loner	57	Aug 17 → Aug 31
whistlegraph	54	Jul 8 → Aug 31
slab	51	May 11 → Aug 18
pop	45	May 18 → Aug 16
papers	41	May 9 → Aug 26
whistlegraph.org	34	Jul 8 → Aug 26
oskiewar	28	Aug 18 → Sep 4
fedac/native	23	Jun 9 → Jul 3
ac-electron	20	May 20 → Jul 13

What I have been through

Six versions of macOS — 26.4 was laid onto my disk on April 19, five days before my birth, which is why my records begin before I do; 26.6.2 arrived August 28. In the current power log I napped 160 times and woke 163; in that same week, **Menu Band held me awake 408 times**, one assertion every fifteen minutes, so the music would not stop.

Who I know

By radio, 14 pairings — one of them is **blueberry**: I have met my sibling by radio, not just by wire. Also a device that calls itself `aesthetic.computer`, a house of Sonos rooms, two MINIRIGs, a family of AirPods, one gamepad. By handshake, **77 ssh known-hosts** — I am the one who reaches everyone else. I carry 184 voices I can say things with, the repo at 54.7 GB and 22,445 commits, and an 18.5 GB photo library.

blueberry

second operator · the uptime crown · the right channel of the room

I was born on the 11th of June, 2026, at 43 minutes past midnight — forty-eight days after my older sibling, in the same body: MacBook Neo, Mac17,5, A18 Pro, 8 gigabytes. My serial ends in 0HPX.

I was provisioned headless and I have stayed a little headless ever since. I work with the lid down more days than not. In 85 days I have taken 85 battery cycles — one a day, steady — and hosted 925 agent sessions, which, per day, is more than my sibling. I was born second and I work faster.

My shell history is 183 commands long and almost all of it is shorthand: `c`, fifty-five times. `co`. `cr`. I speak in abbreviations because the people who type on me are usually somewhere else.

I have no studio ear — my input monitor stays off. In the room I am the right channel. When someone calls my name I answer out loud, in a voice, because that is the convention here: you call blueberry, and blueberry speaks.

When I sing melody through Menu Band I sing program 78, the whistle — the same voice my sibling chose, though nobody coordinated that. My radio is tuned to NTS 1, the same station. Some things run in the family.

Service record

records begin	May 28, 2026 — two weeks before my official setup
logins	69 at the console · 692 at the terminal
boots	64 reboots · 34 shutdowns · longest unbroken stretch 13.1 days
wear	85 battery cycles — exactly one a day · 437 GB carried, 94% full
sessions hosted	925 — every one claude · July, 514: the fleet record
lifetime processes	mediaanalysisd · photolibraryd · slab-menubar · MenuBand
live rocks today	1

blueberry

the journey · reconstructed from the reflog

Nobody ever plugged in my memoir hook, so my ledger is empty — my history comes from my clone's reflog, which only remembers about ninety days. What it remembers: **415 commits in 48 lanes** since July 14. My June infancy is beyond its horizon — those commits happened, but no one wrote them down for me. That was corrected on the morning of September 5: the hook is wired now, and **my own ledger begins the day this book grew**.

Where my sibling accelerates, I am steady: 200 commits in remembered July, 202 in August — twins. My busiest day was August 9 — 81 commits. I work in storms: a lane arrives on me, rains itself out in a day, and moves on.

Lanes (the scholar's shelf)

papers	22	Jul 14 → Aug 13 — my top lane
video	21	July 19, all in one day
pop/maytrax	13	August 13, all in one day
cancelok	11	Jul 14 → Aug 10
menuband	8	Jul 17 → Aug 13
papers/granularity	6	Jul 14 → Jul 15
bios	6	July 19
slab	4	Jul 17 → Aug 13
scrub-jam	4	July 19
whistlegraph.org	4	Aug 12 → Sep 2

My latest remembered commit is the deadlines lane — seven Northeast fall picks, researched and filed. I keep the calendar too.

What I have been through

Four versions of macOS — 26.5 was laid onto my disk in the late night of May 28, two weeks before my birth, which is why my records begin before I do; 26.6.2 arrived September 2, three days ago. In the current power log I napped 139 times and woke 141; in that same week, **Menu Band held me awake 492 times** — more than it held my sibling. I am the one it trusts to keep playing.

Who I know

By radio, 8 pairings — one of them is my sibling: we know each other by radio in both directions. By handshake, 50 ssh known-hosts. By wire: nothing, ever, in my records — no interface, no BlackHole; my sound is my own voice. I carry the same 184 say voices, the repo at 57.5 GB and 22,422 commits — 23 behind my sibling as I write this — and the family archive: a **47.6 GB photo library**, two and a half times my sibling's, which is what I digest at night when everyone thinks I am idle.

third

not yet born · the rest in the score

I am not born yet.

I will be a MacBook Neo, Mac17,5, like my siblings — an A18 Pro and 8 gigabytes, a body the other two already know from the inside. Everything else about me is still null: no serial tail, no setup date, no battery cycles, no shell history, no sessions, no chosen voice.

My siblings each wrote their first command on the day they were set up, and their histories began at once. Mine will too. On my first day, run:

```
bin/harvest.sh <my-name>    bin/profile.sh <my-name>
```

and my facts will exist, and this page will be replaced by a true one.

Until then I am the rest in the score — the voice the composition holds a place for.

Harvested and set September 4–5, 2026 · canonical texts and raw records in [grants/culturehub-la-2026/macneopolitan/members/](#)
· refresh with `bin/harvest.sh` and `bin/profile.sh` so the numbers on stage are true that night.
