

CultureHub LA – End of Day

11 August 2026 · residency 16–25 September · what stands, and what is next

The programme was renamed, rebilled and reshaped today. One form is due, one signature is overdue, and one name on the bill is still empty.

Decided today

Billing	AC PRESENTS 2 NEW PIECES · for AC OS and macOS — replacing the <i>Whistlegraph presents</i> line of 9 August
Piece one	<i>Note(s)pat(ial)</i> — six surplus grade-school laptops, AC OS, notepat
Piece two	<i>The MacNeoPolitan Trio</i> — three MacBook Neos, macOS, Menu Band
The form	The evening is a set list of jammies plus a guest set, not a single piece
Identity	Six logotype directions drawn for each work (contact sheets below)

The naming is the strategic win. *Note(s)pat(ial)* contains *Notepat Jam* — the title CultureHub accepted in May. The programme now reads as an expansion of what they picked rather than a substitution for it, which is the cheapest possible answer to the only awkward question the adjustment raises.

What changed against the submitted proposal

	Submitted 21 May	Prepared now
Work	<i>Notepat Jam</i> , one work, ~30 minutes	Two jammies plus a guest set; the first keeps the accepted name inside its new one
Hardware	Six salvaged laptops. “No new equipment is fabricated for the show.”	Nine laptops: six salvaged, three MacBook Neos bought new
Instrument	notepat, on AC Native, on all six machines	notepat/AC Native for one work; Menu Band on macOS for the other
Workshop	Bring <i>any</i> laptop, boot AC Native, leave with an instrument	Menu Band Jam — requires a Mac; AC Native boot demoted to an alternative
Network	Six machines on the studio LAN, “no internet, no cloud”	NTP clock sync, and guest Wi-Fi requested for the workshop

The hardware row is the only one that *reverses* a claim the jury read; the other four restate. Two submitted promises are also still unaddressed — the livestream, and the open-source release of the multitrack and the AC Native image.

The statement, due today

First person, 50–100 words, printed as a quotation credited to you. 77 words:

At CultureHub I’m presenting two new pieces, one for AC OS and one for macOS. *Note(s)pat(ial)* spreads notepat across six surplus grade-school laptops, each booted into AC OS, the operating system I make; from a live control surface I turn the whole sound field through the room. *The MacNeoPolitan Trio* is newer and still taking shape — three MacBook Neos, each played through Menu Band, my menu-bar piano. One runs on machines pulled back from e-waste, the other on machines bought new.

Paste-ready with the bio, links, headshot, credit and alt text in acceptance/FORM-2026-08-11.md. “Still taking shape” keeps the second half free to change while the blush Neo is unbought.

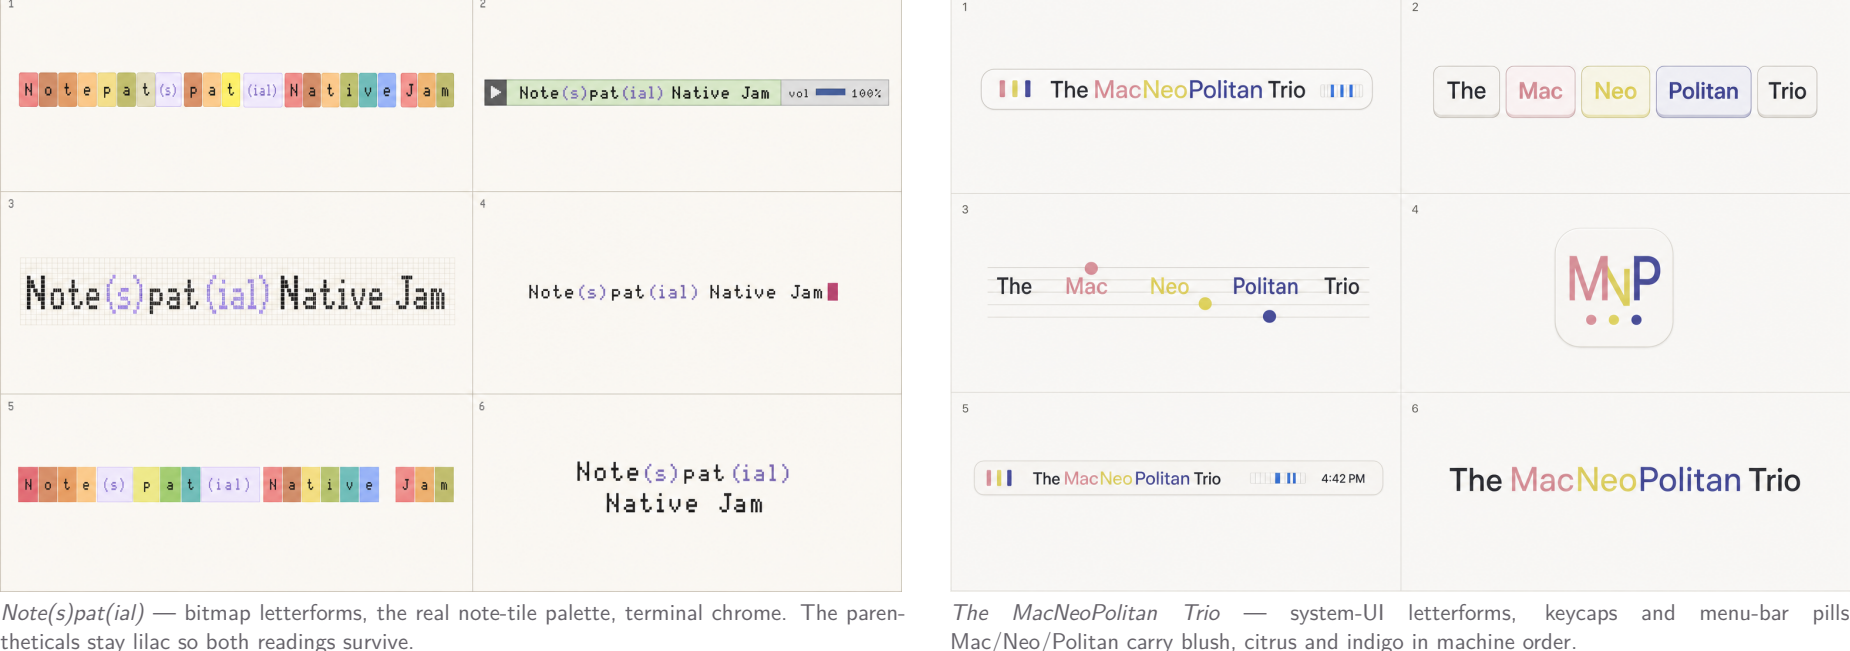

The evening

1	<i>Note(s)pat(ial)</i> six grade-school · AC OS	~20 min
2	Guest set to be confirmed	~10 min
3	<i>The MacNeoPolitan Trio</i> three Neos · macOS	~15 min
4	Conversation	~15 min

The guest set sits second on purpose: the changeover between the salvaged rack and the three Neos is a hardware swap, not a patch change, and the guest covers it. Proposed dates — Menu Band Jam Saturday 19 September, performance Thursday 24 September — remain unconfirmed.

Logotype directions drawn today

Six variants per work, gpt-image-2 through the illy marketing pipeline, using the real notepat / AC Native screenshots and the Menu Band popover as references. These are **direction sheets**, not **artwork** — the letterforms are model-rendered and must be redrawn in real type before anything is published. Note(s)pat(ial) variant 1 misspells the name; the other eleven are correct.

Note(s)pat(ial) — bitmap letterforms, the real note-tile palette, terminal chrome. The parentheticals stay lilac so both readings survive.

The MacNeoPolitan Trio — system-UI letterforms, keycaps and menu-bar pills. Mac/Neo/Politan carry blush, citrus and indigo in machine order.

The hit list

Ordered by when it bites. The first tier is today; nothing below it is blocked by anything above it except where noted.

TODAY – 11 August the artist-page deadline

- ☐ 1. Submit the seven-field artist-page form.
- Name, bio (90 words), statement (77 words), links, the 3:2 green-laptop headshot, credit, alt text. All paste-ready in FORM-2026-08-11.md. The form is CultureHub’s Google Form, not an email.
- ☐ 2. Decide: “jammies” or “two works” in the public quotation.
- Your word is currently in the statement, and that text goes into CultureHub’s own resident announcement. Both readings are 77 words. This is the only wording call left.
- ☐ 3. Sign and return the corrected LOA.
- Sent 5 August; you had offered to re-sign immediately. Six days open, and README.md still wrongly lists it as awaiting them. Clear it in the same sitting as the form.

THIS WEEK – by 16 August the working technical deadline

- ☐ 4. Name and invite the guest.
- Nobody has been asked. It changes the running time, the rider, whether a fee comes out of the \$2,000, and the credit line CultureHub publishes. Nothing public can imply a guest until someone accepts.
- ☐ 5. Send the technical rider and ask for their technical contact.
- TECH-RIDER.md covers nine power positions, six surround channels, the NTP sync path and its failure mode, guest Wi-Fi for the workshop, and changeover time.
- ☐ 6. Get the public-programme dates confirmed.
- 19 and 24 September are still proposals. The event-page copy, the poster, and the broadside all wait on this.
- ☐ 7. Verify the Kalio sixth-channel path.
- Flagged in the rider as unverified. The whole spatial premise of piece one depends on six discrete channels.

BEFORE THE ANNOUNCEMENT – late Aug / early Sept embargo holds until then

- ☐ 8. Pick one logotype direction per work and have it redrawn in real type.
- The contact sheets are direction only. Say which numbers win and they can be set in the packet’s own fonts so they land as live type.
- ☐ 9. Update ARTIST-PAGE.md and EVENT-PAGE.md.
- Both still say *Whistlegraph presents* with the older work titles. They are the source copy for everything downstream.
- ☐ 10. Decide what happens to system/public/culture-hub-2026/.
- It still reads *Notepat Jam* · submitted and now contradicts the programme. The embargo forbids publishing the new one before their announcement, so this needs a plan rather than a push.
- ☐ 11. Regenerate the full-resolution programme image.
- macneopolitan/gens/program.png (1536×1024) is gone; only the 900×600 copy survives. Rebuild from program.illy.txt before any poster or event-page send.
- ☐ 12. Retire or rebuild artist-page-packet.pdf.
- Stale: single-work statement, bio without Menu Band, blue-background headshot, old project image. Do not attach it to anything in the meantime.

BEFORE LOAD-IN – by 16 September the residency itself

- ☐ 13. Buy the third MacBook Neo (blush).
- A third of piece two does not exist yet. Do not describe the finish more specifically until it is in hand.
- ☐ 14. Score and rehearse *The MacNeoPolitan Trio* on all three machines.
- The .mbscore conductor fires every voice at one shared startEpoch over NTP — rehearse the failure mode, not just the piece.
- ☐ 15. Decide whether neo performs from a clean boot.
- Or whether a fourth machine stands by. This is a load-out-day decision if it is not made earlier.
- ☐ 16. Resolve the livestream, and the open-source release.
- Both were stated flatly in the submitted application. The livestream is now “requested, TBD” and the multitrack / AC Native image release appears nowhere in the acceptance packet.
