Bio

Jeffrey Alan Scudder is a Los Angeles-based artist, educator, and technologist who builds musical instruments and creative tools. He created Aesthetic Computer, Whistlegraph, and AC Native, a bootable operating system that turns aging laptops into instruments. Scudder holds an MFA from Yale and is an Author in Residence at UCLA Social Software. He hosts NELA Computer Club in Chinatown, Los Angeles. His work is held in the collections of KADIST and SMK, the National Gallery of Denmark.

Special Sign

Live Spatial Version

WORKING TITLE — PROVISIONAL

Project statement

During the CultureHub residency, I'm developing an expanded live version of *Special Sign*, my spatial composition for twelve moving sound bodies. Six salvaged laptops booted into AC Native become a distributed instrument inside CultureHub LA's surround system. From a live control surface, I can rotate the entire system, change its speed and trajectory, and redistribute its voices among the computers. The residency lets the 1:41 recorded work unfold as a longer, variable performance whose spatial form is played in real time.
