

Aesthetic Computer — Stack Knowledge

DevOps map: hosts, data, edge, deps, vendors & costs

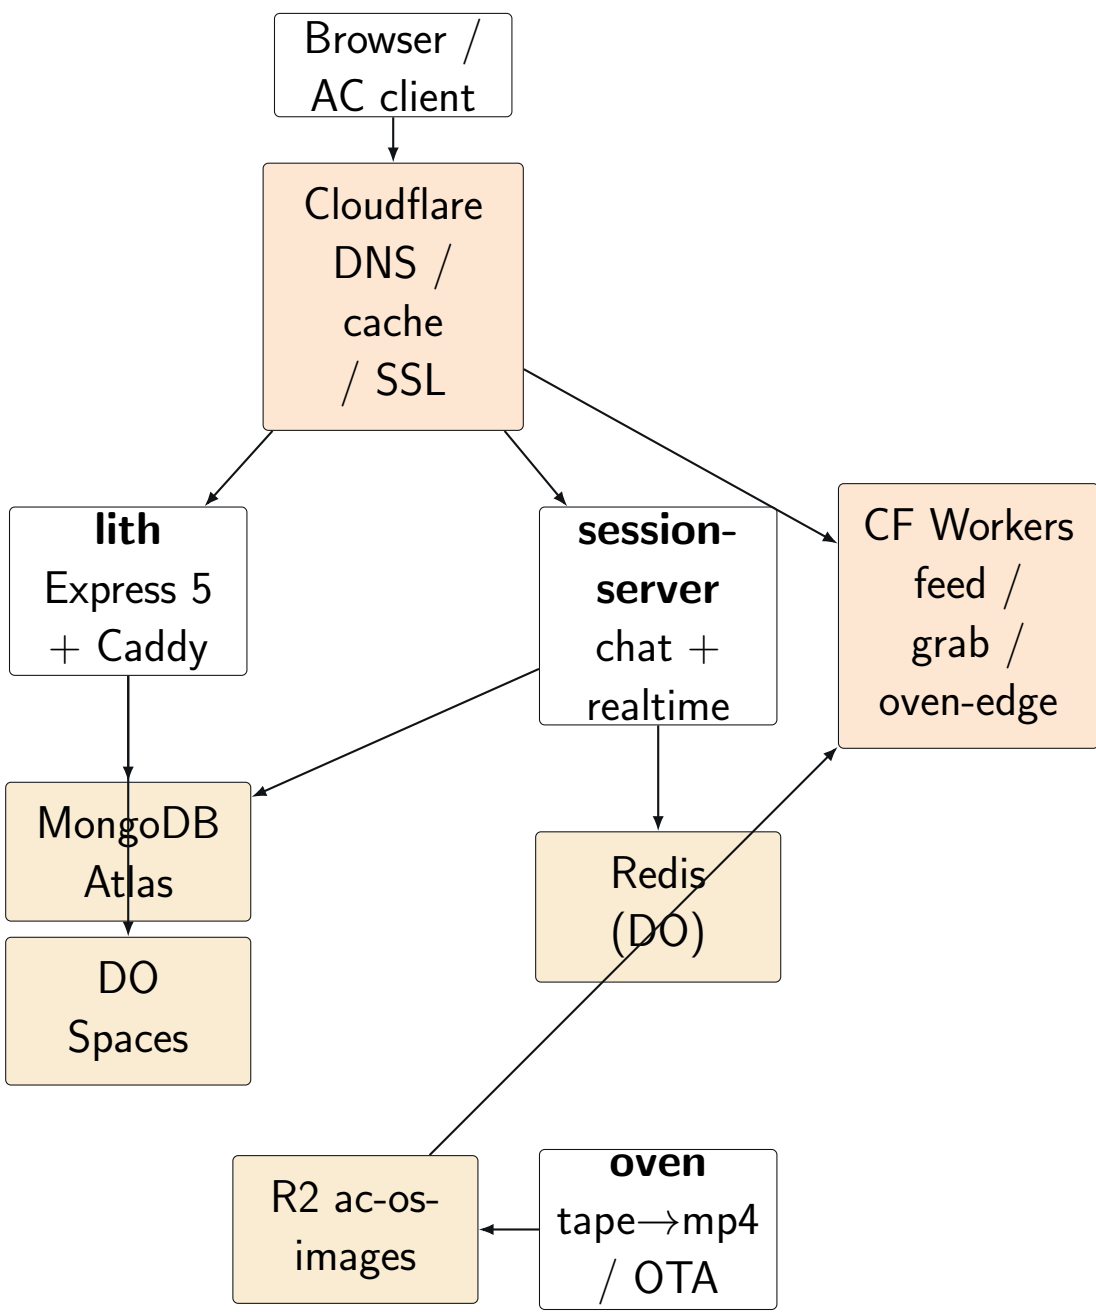

assembled 2026-07-15 from the monorepo (knot: aesthetic.computer/core) | only the **green** cost is documented in-repo; the rest need owner input

Compute hosts

host	provider	role	deploy
lith lith.aesthetic.computer 209.38.133.33	DO 2vcpu-4gb, sfo3	Production web: Express 5 + Caddy monolith. All /api, runtime .mjs, KidLisp, notepat build, knot↔GitHub mirror	fish lith/deploy.fish systemd lith.service (MemMax 3G)
session-server session-server.aesthetic.computer 157.245.134.225	DO droplet	Chat + single shared realtime room (Geckos WS+UDP). Loads chat history on boot (~45s)	fish session-server/deploy.fish systemd, node 20.17 (fmm)
oven oven.aesthetic.computer	DO 4GB/2vCPU	Tape→MP4 (ffmpeg/Sharp); AC Native OS OTA builds; git pollers	fish oven/deploy.fish systemd oven.service
dp1-feed (Go)	same host	DP-1 Feed API, Go + Postgres, 127.0.0.1:8787	systemd dp1-feed.service

Note: Jamssocket (per-piece spawned backends) is **deprecated** — realtime is now the single droplet. Code refs still linger in session-server.

Architecture

git: knot (git@knot.aesthetic.computer/core, what lith pulls) ↔ GitHub mirror (whistlegraph/aesthetic-computer), synced every 60s by ac-mirror.timer on lith.

Outdated (system & session-server)

system/ — major bumps available		
package	current	latest
redis	5.10.0	6.1.0
got	14.6.4	15.1.0
gotrue-js	0.9.29	1.0.1
nanoid	5.1.6	6.0.0
adm-zip	0.5.16	0.6.0
gcp-metadata	7.0.1	8.1.3
typescript (dev)	5.9.3	7.0.2
<i>minor:</i> aws-sdk 3.1020→3.1087, openai 6.46→6.47, three 0.182→0.185		
session-server/ — intentionally pinned		
package	state	why
geoup-lite	held 1.4.10	2.x needs Node ≥24
ws	held 8.21.0	8.21.1 too new (cooldown)
redis	reverted to 4.7	6.x broke prod (see plan)
mongodb	reverted to 6.20	bundled w/ redis revert

Data stores

store	where	holds
MongoDB	Atlas (...qencn...)	users, handles, chat, moods, builds
Redis	DO Managed, sfo3	session / realtime state
Postgres	local to dp1-feed host	DP-1 feed (Go)
DO Spaces	DO	asset CDN: art, tapes, wand, amxd
Firebase	Google	auth, push messaging
CF KV / R2 / Queues	Cloudflare	feed KV, ac-os-images R2, write queue

Projects & runtimes

project	runtime	deploys to
system	Node	lith (Express+Caddy)
session-server	Node 20	DO droplet (systemd)
lith	Node ESM (express 5)	the monolith itself
oven	Node ≥20 (express 4)	oven droplet
dp1-feed	Cloudflare Worker + Go	wrangler / systemd
grab	CF Worker (Browser Rendering)	grab.aesthetic.computer
oven-edge	CF Worker + R2	os.aesthetic.computer

Vendors & costs

vendor / use	billing	cost
DO Droplet — lith host	subscription	\$24/mo
DO Droplet — session-server	subscription	<i>needs input</i>
DO Droplet — oven	subscription	<i>needs input</i>
DO Spaces — asset CDN	storage + egress	<i>needs input</i>
MongoDB Atlas primary DB	subscription/usage	<i>needs input</i>
Redis — managed, sfo3	subscription/usage	<i>needs input</i>
Cloudflare DNS/cache	free tier likely	<i>usage</i>
Cloudflare Workers/KV/R2/Queues	usage	<i>usage</i>
Cloudflare Browser Rendering (grab)	paid tier	<i>needs input</i>
Firebase	free tier likely	<i>usage</i>

Mac fleet & hardware

box	os	role
-----	----	------
