

Special Sign

Live Spatial Version & technical rider

WORKING TITLE — PROVISIONAL

The laptop-to-speaker relationship moves during the performance.

System

- Six artist-supplied laptops booted from six AC Native USB drives.
- Independent sound bodies distributed among the six laptops.
- Live control of system rotation, trajectory, speed, and voice routing.
- Local wired or isolated Wi-Fi network for clock, transport, and control.
- Six discrete audio feeds to the venue's spatial system, subject to the verified 5.1 topology.
- House projection showing the live spatial score.

House request

Audio & network & projection & room

- Kalio 5.1 system with independently addressable inputs; confirm whether the sixth path is full-range or LFE-only.
- Audio interface or interfaces providing six line-level outputs, with suitable DI boxes, cabling, and adapters.
- Projector, screen or projection wall, and HDMI input near the performance position.
- Dedicated router or switch isolated from public traffic.
- Six laptop power positions and conditioned power for audio/network gear.
- Six low tables or plinths around the audience field.
- Central seating for approximately 20–40 people, subject to room capacity and accessible routes.
- Separate stereo livestream/documentation feed derived from the spatial mix.
- One technical rehearsal with CultureHub's audio and streaming staff.

Signal plan

Source	House destination
Laptops 1–5	Discrete full-range house inputs 1–5
Laptop 6	Full-range input 6 if available; otherwise a verified alternate route
Control laptop	Network control and projected score; no fixed audience-audio output
Documentation	Separate stereo fold-down, not the spatial performance bus

The renderer will use five full-range channels if CultureHub's sixth channel is LFE-only, routing only derived low-frequency material to LFE. An additional full-range speaker may be used if the venue supplies and approves it.

Responsibilities

What Jeffrey brings & what the venue confirms

Jeffrey brings

- Six tested laptops and two spares.
- Six AC Native USB drives and two spares.
- Laptop power supplies and primary control laptop.
- Owned USB, HDMI, and network adapters.
- Software images and offline recovery media.

Confirm with CultureHub

- Exact Kalio speaker layout, sixth-channel bandwidth, and spatial routing interface.
- Available interface channel count, connectors, and sample rate.
- Wired network availability and house network policy.
- Projector resolution, throw, connectors, and screen location.
- Room dimensions, capacity, furniture, and accessible seating route.
- Livestream platform, capture format, archive ownership, and file delivery.
- Load-in, soundcheck, public-program, and strike hours.
- Whether workshop participants may boot their laptops from USB.
